

Powerpoint Mental Starters

For Key Stage 1 and 2
Mathematics and Numeracy Lessons

Powerpoint Mental Starters are a bright and stimulating way to start your maths and numeracy lessons. They encourage pupils to carry out mental calculations on a variety of topics.

They are highly user friendly and require virtually no advance planning by the teacher. When you run a presentation, the first screen states the title and describes what has to be done to find the answers.

Pupils may answer questions in turn, or use your own preferred method of selecting individuals to offer answers. Full class participation can be encouraged by the use of "show me" whiteboards, or asking pupils to write down their answers.

Answers appear after each question, so each question is self contained.

As well as starters to lessons, individual pupils could be allowed to use the presentations on their own to practice their mental skills, checking answer themselves after each question.

Some of the features of this easy to use series are:

40 lesson starters per pack.

Bright and colourful powerpoint presentations.

Available for years 1, 2, 3, 4, 5 and 6.

Typically 20 questions per starter activity.

Answer appears on screen after each question.

Fully editable if desired.

Written by an experienced maths teacher.
