Introduction

Welcome to the **Maths Topics Homework Sheets for Year 6** PDF book, a resource designed to cover your entire maths homework requirement for Year 6.

This practical learning tool includes 40 double-sided homework sheets, covering topics on the Year 6 National Curriculum. We recommend one homework sheet to be set each week, with any remaining sheets to be set as holiday homework.

As the year progresses, pupils could put their completed sheets into a homework file or folder, hence providing a full homework record for every pupil in your Year 6 class.

Alternatively, the PDF book could be printed out and stapled or ring-bound to make a complete book for each pupil.

The sheets can be tackled in any order depending upon your own scheme of work for Year 6. They appear in this book broadly in the order in which the topics are listed in the National Curriculum.

Answers are also provided in the form of fully filled-in sheets. This should make marking easy and also allows for the relevant page to be projected onto a screen in your classroom to allow for peer-marking.

We hope that your pupils enjoy and benefit from the material in this book.

Details of our other fantastic mathematics resources can be found on our website:

- (5) The number of minutes spent on homework by a pupil on five nights of one week were: 23 mins, 28 mins, 36 mins, 18 mins, 22 mins. Find the total time spent, in hours and minutes.

$$23 + 28 + 36 + 18 + 22 = 127$$

$$127 \div 60 = 2 \text{ remainder } 7$$

2 hrs 7 mins

- (6) A computer was priced at £645. If it was reduced in a sale by £137, what was the sale price?

$$645 - 137 = 508$$

£508

- (7) There are 656 car parking spaces in a large car park. All the spaces are arranged in rows with the same number of spaces in each row. If there are 16 rows, how many spaces are there in each row?

$$656 \div 16 = 41$$

41

- (8) How many hours are there in total in one week?

$$24 \times 7 = 168$$

- (1) Sue said that $4.9 \times 12.1 = 59.29$.
By rounding each of the numbers to the nearest whole number, find an approximate answer to see whether Sue could be correct.

$$5 \times 12 = 60$$

This is close to 59.29, so Sue could be correct

- (2) Sam said that $29.7 \times 41.3 = 12266.1$.
By rounding each of the numbers to the nearest ten, find an approximate answer to see whether Sam could be correct.

$$30 \times 40 = 1,200$$

This is a long way from 12266.1, so Sam is incorrect

- (3) Helen said that $80.94 \div 1.9 = 42.6$.
By rounding each of the numbers to an appropriate value, find an approximate answer to see whether Helen could be correct.

$$80 \div 2 = 40$$

This is close to 42.6, so Helen could be correct

 $B = 360 - 219 = 141^\circ$

(i)

$96 + 114 + 128 = 338$
 $D = 360 - 338 = 22^\circ$

(3) This regular hexagon can be split into six equilateral triangles. What is the size of each angle inside the regular hexagon?

Mean Averages

Answers

Date:

Teacher:

Year
6

- (1) The time, in minutes, a pupil spent on homework during five nights were:

20 minutes, 22 minutes, 18 minutes, 36 minutes, 24 minutes

Find the mean time in minutes spent on homework for the five nights.

$$20 + 22 + 18 + 36 + 24 = 120$$

$$120 \div 5 = 24$$

Mean time:

24 minutes

- (2) A runner ran 4 races one week. The times in seconds for each race were:

58 seconds, 62 seconds, 65 seconds, 59 seconds

Find the mean time in seconds for the four races.

$$58 + 62 + 65 + 59 = 244$$

$$244 \div 4 = 61$$

Mean time:

61 seconds

- (3) A pupil scored the following scores out of 20 on the last six maths tests:

18, 14, 17, 19, 13, 15

Find the mean score for these six tests.

$$18 + 14 + 17 + 19 + 13 + 15 = 96$$

$$96 \div 6 = 16$$

Mean score:

16

- (4) The height and weight of five friends are given below:

Height:	146 cm	152 cm	139 cm	144 cm	154 cm
Weight:	32 kg	35 kg	41 kg	37 kg	46 kg

Find the mean height and mean weight for this group of friends.

$$\text{Height: } 146 + 152 + 139 + 144 + 154 = 735$$

$$735 \div 5 = 147$$

$$\text{Weight: } 32 + 39 + 41 + 37 + 46 = 195$$

$$195 \div 5 = 39$$

Mean Height:

147 cm

Mean Weight:

39 kg

- (5) The temperatures at midday for each day of one week were as follows:
14°C, 17°C, 16°C, 19°C, 13°C, 12°C, 14°C

Find the mean temperature for the week.

$$14 + 17 + 16 + 19 + 13 + 12 + 14 = 105$$

$$105 \div 7 = 15$$

Mean temperature:

15°C

- (6) Six friends get the following amounts of pocket money per week:

£4.50, £5.50, £6.00, £4.00, £2.50, £7.50

Find the mean amount of pocket money.

$$4.5 + 5.5 + 6 + 4 + 2.5 + 7.5 = 30$$

$$30 \div 6 = 5$$

Mean amount:

£5.00

- (7) The heights of four trees in a garden are:

1.5 m, 1.25 m, 1.36 m, 1.13 m

Find the mean height of these four trees.

$$1.5 + 1.25 + 1.36 + 1.13 = 5.24$$

$$5.24 \div 4 = 1.31$$

Mean height:

1.31 m

- (8) The number of sweets in eight boxes of sweets are:

36, 33, 38, 36, 39, 31, 32, 35

Find the mean number of sweets per box.

$$36 + 33 + 38 + 36 + 39 + 31 + 32 + 35 = 280$$

$$280 \div 8 = 35$$

Mean number:

35 sweets

- (9) The mean of three numbers is 15. Two of the numbers are 12 and 19.
What is the third number?

For a mean of 15, the total of the 3 numbers is $15 \times 3 = 45$

$12 + 19 = 31$, so the third number is:

$$45 - 31 = 14$$

Third number:

14

- (10) Three of the four test scores (out of 10) for a pupil are 7, 9 and 6. The mean score for all four tests is 8.
What score did the pupil get in the fourth test?

For a mean of 8, the total of all 4 numbers is $8 \times 4 = 32$

$7 + 9 + 6 = 22$, so the fourth score is:

$$32 - 22 = 10$$

Fourth score:

10
